

Marcelle Momha is a candidate for the Mid-Career Master of Public Administration at the Harvard Kennedy School of Government. She holds a European Master's degree in Computer Science from the Institute of CS Engineering of Limoges, France, and a Master's degree in Public Policy from American University, Washington DC. She is passionate about the transformative potential of responsible technology to uplift humanity. Early in her career, she worked as an international consultant in IT and software projects, creating websites and digital platforms.

Later, she shifted to international development. She led a department of 120 employees in a nonprofit organization and spearheaded the design and evaluation of over 150 multidisciplinary training programs for over 6,000 young adults across 24 African countries. The advancement of emerging technologies and their impact on the environment, peace, and security motivated her to embrace tech policy. She is a certified Responsible AI leader and a member of AI 2030, a global movement for Responsible AI for All and for Good. She studies the challenges and tradeoffs faced by public and private actors, as well as consumers, in defining the rules for the implementation and use of digital technologies, in particular AI and autonomous systems.

Currently, she is co-founding a nonprofit called "Voice 4 AI Governance". Her startup offers live Responsible AI & Policymaking training to upskill and reskill low- to high-skilled workers and underrepresented communities in the Tech sector. Her target partners include minority communities, governments, nonprofits, businesses, and educational institutions investing in digital transformation, workforce readiness and AI governance to prepare for the future of work. Their goal is to empower individuals and train them to adopt AI responsibly to improve their future career prospects.
